

Metal Key Switch Installation

The eGO Cycle was manufactured around 20 years ago so some of its replacement parts that are produced today such as the metal key switch may require a simple modification to install.

Do not force the new key switch into the key switch opening. If the new key switch will not effortlessly fit into the opening then a small amount of metal will need to be filed away on the two flat sides of the opening for the key switch. The amount of metal that may need to be filed away is usually less than 1mm (3/64”).

The dashboard is made of aluminum which is easy to file so any flat metal file that fits into the opening and is not wider than the flat sides of the opening can be used to file the metal.

File Only If Key Switch Does Not Effortlessly Fit Into Opening

Key Switch, Chrome, with Push-On Terminals
Part Number: EGO-10020

Key Switch, Chrome, with Wires and Connector
Part Number: EGO-10021
